**AGRICARB TUNGSTEN CARBIDE PARTS
 FOR WORKING HIGH ABRASIVE SOILS**

Specialized in the manufacture of tungsten carbide, Agricarb sells tips for the working parts of plough, chisels and harrows, to very particular mechanical specifications.

Highly wear resistant due to their use of tungsten carbide, these Agricarb tips are particularly suitable for use on wear parts for tools working highly abrasive soils.

Obtained by the reduction of an ore, Wolfram tungsten offers excellent heat resistance. The cementation of tungsten powder with carbon produces tungsten carbide powder, whose grains are almost as hard as those of diamond.

The wear strength of this material gives Agricarb parts a lifetime 4 to 10 times longer than for traditional parts. Ensuring a constant working depth and maintaining the angle of attack, they generate increased productivity.

The savings obtained from working efficiency, maintenance and parts replacement give Agricarb products an unprecedented price/efficiency ratio.

These patented plates are fitted to the wear parts using the company's own brazing process.
