**BAUSER – full-line provider of products visualising and controlling vehicle functions –
As versatile as your applications**

Whether in the agricultural sector or in utility vehicles of the Off-Highway Market, BAUSER multifunctional instruments or I/O modules and immobilisers impress all along the line.

All product ranges are constructed very robustly, which make them especially attractive for the agricultural vehicles application demands, a high standard of all relevant industrial and vehicle-technical requirements have also been fulfilled.

With BAUSER's standard solutions in hard and software, any custom and complementary development is carried out easily, rapidly and cost-efficiently. The qualified BAUSER team draw upon their wide experience in consulting, engineering und manufacturing for more than 50 years.

NEW: more flexibility in visualising and controlling; increased user safety

BAUSER Standard multifunctional instruments are available in different casing front dimensions. In particular the NEW dimensions of 230x120mm and 282x135mm or 177x134mm and 222x161mm are perfectly suited to applications in agricultural machines.

Various display technologies with different colour back lits – TN (twisted nematic), Dot-Matrix or NEW TFT (thin film transistor) LCD technology – visualise flexible and comfortable all kind of operational parameters and warnings. The new colour displays in TFT-matrix are available in dimensions of 4.3", 5.0" or 7.0" and in resolutions of 480x272 or 800x480 pixels. A realisation of custom indication requirements with a stabbing accurate screen is herewith guaranteed. The user experiences an increased safety and comfort in the operational mode of the vehicle thanks to the optionally integrated backward camera, which can be shown on the display while driving backwards.

With the NEW *BAUSER I/O modules* (Input/Output module) it is easy, safe and robust to control the vehicle functions. The different I/O constellation possibilities like digital in- and analogue outputs or CAN in- and outputs as well as analogue in- and PWM outputs enable a simple and cost-efficient creation of custom control applications.

NEW where safety is concerned: the *electronic immobilisers* with CAN-Bus interface and relay outputs. These products offer a reliable and tamper-resistant protection against vehicle thefts or any non-desired operations by an ignition key with cryptographic transponder.

Detailed information about BAUSER, its NEWs and whole product line are available under www.bauser-control.de in the internet.
