Established in 2000, **biogas weser-ems GmbH & Co. KG** is a leading company in the field of biogas technology. We design and build turn-key biogas plants for industry and agriculture and have years of experience resulting from over 150 completed projects. We are also represented on the international market, with our own companies in Italy, Spain and Poland. Our experienced team of experts develops individual, profitable and environmentally-friendly plant designs and facilitates an integral support service. We offer various sizes and types of biogas plants, from farm plants with electrical power of 150 kW up to biogas parks with several MW. Our services include planning and project development, plant construction and commissioning as well as service and maintenance. You can also purchase single components. biogas weser-ems can guarantee a constant high level of process stability thanks to our experience and the sturdy, optimised and reliable structures built with top-quality and powerful system components. Furthermore we also provide biogas processing treatment and provide advice regarding cost-effective heat energy recovery concepts.
